

GOOD NEWS

READY...SET...GO

We are thankful for the short time we had with three of our children home. We are also thankful for technology that allows us to video chat with Cora and Seth. It's been so long since we've seen them face to face, but we are happy that they are in a place where they are using their gifts to teach and to serve God.

Last month, we had more than fifty teenagers attend our junior counselor training sessions. Most of them signed up for multiple weeks. We have 14 who are taking on the extra responsibility to be junior staff this year. We're so thankful for these teenagers, most of whom are volunteers. We couldn't do camp without them.

Parents are so happy that we can be fully open and offer busing again this year. Our online registration has also been a great convenience for both the parents and the office. We're thankful for God's help to learn these new things.

On June 14th it all begins as the first group of campers and volunteers arrive. Praise God for what He has planned for our camp this summer.

CORA/SETH

Cora graduated on May 8 with her Master of Education degree. She was not able to attend, but received her diploma in the mail. We're so proud of her hard work.

JACOB

Jacob returned home for the summer on May 11. He's looking forward to some rest and recovery time before he spends the summer teaching at camp and Vacation Bible Schools. He will have just one more year of college to complete his degree in computer science. He has really enjoyed his college experience. He's made some good friends and had many opportunities.

CALEB

Caleb will stop his caring for his great-grandmother at the beginning of June to prepare to be the camp chapel leader for his fourth summer. He's already working with the script and props and coming up with creative ways to teach the Bible verses, songs, and biblical teachings that need to be stressed each day.

OLIVIA

Olivia was home for less than two weeks before she headed to Jacksonville, FL for her summer internship with the Navy. She will be doing welding research, and she hopes to learn a lot about this field of study. She recently joined the Welding Society of America and was elected treasurer of her local chapter at school, which is the second oldest chapter in the USA.
